Introduction and Background

The Maldives is a small island nation characterized by low-lying atolls with extremely limited freshwater resources. The country receives considerable annual rainfall, ranging from 1,700 to 2,300 mm, which recharges shallow groundwater aquifers that exist as thin freshwater lenses floating over seawater. These aquifers, typically only one to two meters below the surface, alongside harvested rainwater, constitute the primary natural freshwater sources for the country. The country has no rivers or lakes, with the exception of a few mangroves and wetlands with fresh or brackish water in some islands.

Despite the presence of these natural resources, water scarcity is a growing concern. The freshwater lenses are highly vulnerable due to the islands' porous sandy soils, which make them prone to saltwater intrusion from sea-level rise, storm surges, and flooding. Excessive groundwater extraction has further undermined recharge processes, leading to salinization and reduced quality. In addition, groundwater contamination has been aggravated by improper waste disposal, poor sanitation systems, and the long-term impacts of the 2004 Indian Ocean tsunami, rendering much of it unsuitable for potable use.

Rainwater harvesting remains the most widely used method for securing drinking water at the household and community levels. However, reliance on rainwater makes communities highly dependent on rainfall patterns. During the northeast monsoon (December–April), when rainfall is limited, storage tanks often run dry. This dry season has become increasingly unpredictable due to climate variability, further straining household and community water supplies. In many instances, this has resulted in reliance on costly emergency water supply from Malé to outer islands. While the Government of Maldives is implementing desalination and piped distribution systems as a long-term solution, these approaches are expensive and energy-intensive, underscoring the need for complementary strategies to conserve and manage natural water resources.

The scarcity of safe freshwater is compounded by the strong interdependence of water, sanitation, and hygiene (WASH) services. Untreated wastewater and overextraction of aquifers continue to threaten freshwater ecosystems, reduce water quality, and heighten vulnerabilities across island communities.

To overcome these challenges, national frameworks—including the National Water and Sewerage Strategic Plan (2020–2025), the Water and Sewerage Act (Law No. 8/2020), and the Water Resources Protection Regulation—have emphasized the importance of island-level water conservation and management. The development of Island Water Resource Conservation and Management Plans (IWRCMPs) is therefore essential. These plans provide a structured mechanism for data collection, monitoring, and decision-making, ensuring that water resources are managed sustainably for present and future generations.

The development of an IWRCMP also requires inclusive engagement with island communities, ensuring that local priorities and knowledge are integrated into planning. NGOs and community-based organizations (CBOs) play a vital role in this process, supporting island councils to implement participatory approaches.

This consultancy, funded through the SWA Technical Assistance Grant, will support the development of the IWRCMP for B.Dharavandhoo. Priority will be given to registered NGOs and CBOs within the island; in their absence, other eligible organizations will be considered.

Objective

The main objectives of the assignment are:

- To assess current water sources, systems, and usage patterns, and identify challenges and risks.
- To engage the local community and stakeholders to ensure the plan reflects their needs and priorities.
- To provide practical, sustainable, and climate-resilient recommendations aligned with national policies.
- To develop a comprehensive Island Water Resource Management Plan for B.Dharavandhoo.

Scope of Assignment

Task 1: Inception Phase

- 1- Review the IWRCMP guidebook, planning templates, and relevant national policies and regulations.
- 2- Establish an island water resource management team and conduct initial coordination meetings with the Ministry of Tourism and Environment, and the B.Dharavandhoo Island Council.
- 3- Prepare an Inception Report, including methodology, stakeholder engagement strategy, and work plan.

Task 2: Data Collection and Draft IWRCMP

- 1- Map and document island water resources, including:
 - Rainwater harvesting systems (household and community-level)
 - Reverse osmosis (RO) plants
 - Groundwater wells and community tanks
 - Agricultural and commercial water systems
 - Mangroves and other water bodies (if present)
- 2- Identify sampling criteria based on household numbers and island geography.
- 3- Complete water resource templates, identifying potential biological, physical, and chemical hazards for each resource, as well as the current status.
- 4- Develop individual management forms for each resource, recommending both short-term and long-term interventions to improve water quality and sustainability.

5- Consolidate findings into a draft IWRCMP template for B.Dharavandhoo.

Task 3: Finalization and Handover

- 1- Present the draft plan to island stakeholders and government authorities for consultation and feedback.
- 2- Revise and finalize the IWRCMP, incorporating stakeholder and technical review comments.

Submit the final IWRCMP along with all supporting datasets and documentation.

Requirements for Experience and Qualifications

Team Leader

- Degree/Diploma in Social Work, Project Management, Business Management, Environmental Science, Surveying, or a related field; OR minimum 1 year of proven experience in the implementation of social programmes, island development programmes, awareness programmes.
- Trainings or Previous experience that show knowledge and understanding of natural resources, surveying, water resource management, and climate change adaptation will be an added advantage.
- Experience in leadership, management, and communication skills, particularly in coordinating and managing multidisciplinary teams.
- Experience in engaging with local councils, NGOs, CBOs, and community stakeholders to ensure participatory and inclusive planning.

Trainings or Previous experience that show strong report writing, analytical, and facilitation skills, with the ability to deliver outputs in Dhivehi.

Supporting Member 01, 02 and 03

- Degree/Diploma in Social Work qualification in Project Management, Environmental Studies, Social Science, or related field; OR minimum 1 year of proven experience in supporting island-level or community-based projects.
- Trainings or Previous experience that show knowledge and understanding of natural resources, surveying, water resource management, and climate change adaptation will be an added advantage.
- Trainings or Previous experience that show familiarity with the Maldives' local context and ability to work effectively with communities.

• Trainings or Previous experience that show excellent teamwork and communication skills to support multidisciplinary teams. • Training or Previous experience that show ability to support data collection, community consultations, and preparation of reports/templates. • Training or Previous experience that show proficiency in Dhivehi, with ability to support documentation and communication in local language.					
Indicative Tasks					
1. Inception Report – Within 1 weeks of contract signing 2. Draft and final IWRCMP for B.Dharavandhoo – Based on data collection and stakeholder input					
Duration of the Consultancy					
Duration of the assignment is (01) calendar months upon signing the contract.
